

Character Art Requirement

Kidsverse+ — child avatar system

Prepared for Design / Art Date 7 September 2026 Status Blocked on artwork

In one sentence

A child can choose one of four characters, but three of the four cannot be shown, because two of them were never drawn and the third cannot be separated from the robot mascot it was drawn against.

1. What the feature is meant to do

The child picks a character once, on the avatar screen. That character then has to be the one performing every action for the rest of the app, across all 36 screens. The pose, camera angle and layout never change. Only the child changes.

28 of those screens draw a full child figure. Because two characters have no artwork and the rest cannot be assembled, every child currently sees the same default boy no matter what they picked.

2. Current status

Item	Count	State
Screens designed and built	36	Done
Screens that draw a full child figure	28	Done
Distinct poses the child performs	12	Defined
Characters offered in the avatar picker	4	Built
Characters with complete artwork	2	2 missing
Screens with the robot baked into the child image	25	Blocker
Characters actually shown to a child today	1	Feature off

What the user sees right now

A child selects the girl. Her face appears correctly in the top-right corner, because a head crop exists for all four characters. But the large figure on every screen is still the default boy. This is not a coding fault. The app is deliberately holding the swap back, because turning it on with the artwork we have makes the robot mascot disappear from 25 screens.

3. The four characters

boy_01

Brown messy hair, light skin

Delivered

boy_02

Dark skin, short curly hair

Missing

girl_01

Dark skin, two curly buns

Missing

girl_02

Short bob, headband

Delivered

Character	Look	Situation
boy_01	Brown messy hair, light skin	This is the default child shown to everyone today.
boy_02	Dark skin, short curly hair	Selectable in the app, but has no artwork behind it.
girl_01	Dark skin, two curly buns	Selectable in the app, but has no artwork behind it.
girl_02	Short bob, headband	Artwork received, but cannot be shown yet. See the blocker.

Note on the first delivery: it arrived in two folders named `boy` and `girl`. On inspection the artwork inside them was the default boy and the bob-haired girl, not the two characters that were actually missing. So of the three swappable characters, one arrived and two did not.

4. The blocker, explained

On 25 of the 28 screens the child and the robot mascot are drawn into a **single flat image**. There is no seam between them. They are one picture.

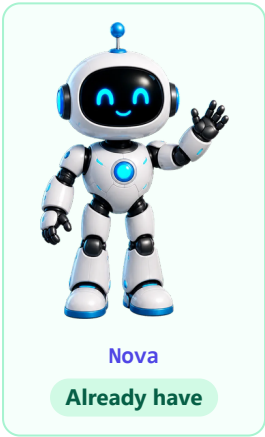

To show a different child on those screens, the app has to draw a picture of that child alone. The robot then disappears along with the boy she was drawn against. On 11 of those screens the two figures physically touch or overlap, so no automatic separation is possible.

A partial fix was rejected. The robot appearing on some screens and not others is worse for a child than her being consistently present. So the character swap is switched off entirely until it can be done properly.

Good news — most of this is already solved

A clean, separate, full-body image of the robot already exists in the project. It covers every pose where she stands near the child without their hands meeting, which is 9 of the 12 poses. Those screens can be assembled in code with no new artwork at all.

That leaves only **2 poses** where the child and the robot are physically joined. Those are the only ones that genuinely have to be drawn. The appendix shows the check, screen by screen.

Poses the existing robot image already covers

P02, P03, P05, P07, P08, P09, P11, P12 and P13. In all of these the robot stands near the child without their hands meeting, so one image serves all nine.

Poses that still have to be drawn

P01 hand-hold · **P16** fist-bump

In these two the child’s hand is clasped around the robot’s. The point of contact has to be drawn; it cannot be assembled from two separate images. The high-five was expected to be a third, but the artwork has a clear gap between the hands.

5. The request

- Item 1 — boy_02 , all 12 poses**
- Dark skin, short curly hair. Selectable in the app today with nothing behind it.
- Item 2 — girl_01 , all 12 poses**
- Dark skin, two curly buns. Same situation.

Item 3 — the 2 contact poses, for the two characters already delivered

These must be drawn with **the child and the robot together in one frame**, holding hands, high-fiving or bumping fists. A sample in exactly this style has already been produced, so the approach is proven.

Item	Character	Poses each	Files
1	boy_02 — dark skin, short curly hair	12	12

2	girl_01 — dark skin, two curly buns	12	12
3	girl_02 and boy_01 , robot in frame	2	4
Total			28

Items 1 and 2 already include their own two contact poses, so the total new artwork is 28 files.

6. Pose reference — all 12

Shown as the default boy, which is the approved reference. Each new character must match the same camera angle, framing, scale and expression. The three marked **Nova contact** need the robot drawn into the same frame.

Two cards are outlined in amber. Those poses have never been drawn for any character. The picture on them is a neutral standing figure borrowed as a placeholder, so please work from the written description on those two, not the image.

P01

Hand-hold with Nova

Standing front, full body, holding Nova's hand on the child's left.

Placeholder image. This pose has never been drawn. The figure shown is a neutral standing pose borrowed to fill the gap, not the pose described above.

Nova contact

full

Used on: Landing, Login

P02

Presenting hologram

Standing front, left arm open toward a floating orb at chest height, palm up.

Nova beside

full

Used on: Create Child

P03

Standing relaxed

Full body front, weight even, hands loose at the sides. The most reused pose.

Nova beside

full

Used on: Setup, Test Intro, Profile, Our Journey

P05

Pointing up

Right arm raised, index finger up, head tilted up, open grin.

Nova beside

full

Used on: Interests, Goals, Learn Hub

P07

Arm extended

Standing front, right arm extended to the side at waist height, presenting.

Nova beside

full

Used on: Home, Test Arena, Opponents

P08

Seated on the ground

Sitting, one leg tucked, weight on one hand behind, looking up and to the right.

Nova beside

full

Used on: Welcome

P09

Turned toward lesson

Standing, body angled inward, gaze on the teaching object to the side.

Nova beside full

Used on: Topic, Discover, Spot Mistake, Reading, Confidence

P11

High-five celebration

Mid-stride, both arms up in celebration. Nova raises a hand nearby; the hands do not meet.

Nova beside full

Used on: Mission Complete

P12

Waist-up beside Nova

Cropped at the waist, shoulder to shoulder with Nova, both facing front.

Placeholder image. This pose has never been drawn. The figure shown is a neutral standing pose borrowed to fill the gap, not the pose described above.

Nova beside waist

Used on: Test Question

P13

Fist raised, victory

One fist punched up, other arm bent, weight on the back foot, wide grin.

Nova beside full

Used on: Test Result, Challenge, League

P14

Arms crossed

Standing three-quarter facing right, arms folded, chin level. Battle stance.

No Nova full

Used on: Battle Preview

P16

Fist-bump with Nova

Three-quarter turned toward Nova, fist forward meeting Nova's fist.

Nova contact full

Used on: Battle Result

7. File format and naming

Background	Flat green screen, same as the first delivery. No shadow cast onto the background.
Format	PNG, one figure per file. For the two contact poses, one figure means the child and the robot together.
Resolution	1024 px on the long edge or higher. The first delivery was 1024 px and that was enough.
Camera	Identical to the reference on the previous page. Same eye level, same distance, same lens. A different camera angle cannot be corrected in code.
Framing	Full body with the feet included, except <code>P12</code> which is cropped at the waist.
Naming	<code><character>/<POSE_ID>_<name>.png</code>

Expected folder structure

```
boy_02/
  P01_hand-hold-with-nova.png      P09_turned-toward-lesson.png
  P02_presenting-hologram.png      P11_high-five-celebration.png
  P03_standing-relaxed.png         P12_waist-up-beside-nova.png
  P05_pointing-up.png              P13_fist-raised-victory.png
  P07_arm-extended.png             P14_arms-crossed.png
  P08_seated-on-the-ground.png     P16_fist-bump-with-nova.png

girl_01/
  ... the same 12 files ...

girl_02/
  P01_hand-hold-with-nova.png      P16_fist-bump-with-nova.png

boy_01/
  P01_hand-hold-with-nova.png      P16_fist-bump-with-nova.png
```

The pose IDs above are the application’s own. The first delivery used a different numbering, and matching the two by number would have put the wrong pose on every screen. Please use these IDs exactly as written.

8. Suggested order of delivery

#	Deliverable	What it unlocks
1	The 2 contact poses for <code>girl_02</code>	Turns the character swap on for the first non-default character, across all 28 screens. This is the smallest delivery that makes the feature visibly work.
2	<code>girl_01</code> , all 12 poses	A second character becomes selectable. Girl coverage complete.
3	<code>boy_02</code> , all 12 poses	All four characters live. Feature complete.

The fastest path

Two drawings, the hand-hold and the fist-bump for girl_02 , are enough to switch the whole feature on and demonstrate it working end to end. Everything after that is repetition of a proven process.

9. What happens on our side once it arrives

Step	State
Green background removed automatically and each figure trimmed	Built and tested
Each child figure positioned per screen from the approved layout	Built and tested
Robot drawn as her own separate layer on the 25 screens	To build
Hold on the character swap released	One line of configuration

The first two steps are done and were proven on the first delivery. The third is the remaining engineering work on our side and does not depend on the artwork, so it can be built in parallel rather than after. Once the files land, the swap goes live the same week.

Appendix — every screen, one row each

All 36 screens, the pose each one draws, and exactly what it needs. This is derived from the artwork itself, not from the project's own records, because the records turned out to be wrong in three places. Those three rows are marked.

#	Screen	Pose	Pose name	What it needs	Why
01	Landing /	P01	Hand-hold with Nova	Must be drawn as a pair	hands clasped
02	Parent Login /parent/login	P01	Hand-hold with Nova	Robot placed by code	joined by a ground swoosh only
03	Create Child /onboarding/child	P02	Presenting hologram	Robot lifts off automatically	two separate shapes in the file
04	Learning Setup /onboarding/grade-board	P03	Standing relaxed	Robot placed by code	both stand on one platform
05	Avatar /onboarding/avatar	P04	Avatar podium	Child only	swaps cleanly, no robot in the picture
06	Interests /onboarding/interests	P05	Pointing up	Robot lifts off automatically	two separate shapes in the file
07	Goals /onboarding/goals	P05	Pointing up	Robot lifts off automatically	two separate shapes in the file
08	Meet Nova /onboarding/nova	P06	Back view, looking up	Robot lifts off automatically	two separate shapes in the file
09	Welcome /welcome	P08	Seated on the ground	Robot placed by code	joined at the shadow
10	(unused record)	P07	Arm extended	Stale record	poses.js still lists it; nothing renders it
10	Home /home	P07	Arm extended	Robot lifts off automatically	two separate shapes in the file
11	Learn Hub /learn	P05	Pointing up	Robot lifts off automatically	two separate shapes in the file
12	Topic /learn/topics/:world	P09	Turned toward lesson	Child only	swaps cleanly, no robot in the picture
13	Journey /journey	P10	Seated in hover car	Nothing needed	no child figure on this screen
14	Lesson Discover /missions/fractions	P09	Turned toward lesson	Robot lifts off automatically	two separate shapes in the file

15	(deleted screen)	P09	Turned toward lesson	Stale record	poses.js still lists it; nothing renders it
16	Spot Mistake <i>/missions/fractions/spot-mistake</i>	P09	Turned toward lesson	Robot lifts off automatically	two separate shapes in the file
17	Mission Complete <i>/missions/fractions/complete</i>	P11	High-five celebration	Robot lifts off automatically	two separate shapes in the file
18	Test Arena <i>/tests</i>	P07	Arm extended	Robot placed by code	figures overlap
19	Test Intro <i>/tests/mixed/intro</i>	P03	Standing relaxed	Robot lifts off automatically	two separate shapes in the file
20	Test Question <i>/tests/mixed/question</i>	P12	Waist-up beside Nova	Robot placed by code	both on one glowing ring
21	Test Result <i>/tests/mixed/result</i>	P13	Fist raised, victory	Robot lifts off automatically	two separate shapes in the file
22	Extra Learning <i>/extra</i>	P17	Sitting, reading	Nothing needed	no child figure on this screen
23	Reading Fluency <i>/extra/reading</i>	P09	Turned toward lesson	Robot lifts off automatically	two separate shapes in the file
24	Confidence Mission <i>/extra/confidence</i>	P09	Turned toward lesson	Robot placed by code	MISLABELLED solo: Nova is here and overlaps
25	Challenge Home <i>/challenge</i>	P13	Fist raised, victory	Robot lifts off automatically	two separate shapes in the file
26	Battle Opponents <i>/challenge/opponents</i>	P07	Arm extended	Robot placed by code	figures overlap
27	Battle Preview <i>/challenge/preview</i>	P14	Arms crossed	Child only	swaps cleanly, no robot in the picture
28	Battle <i>/challenge/battle</i>	P15	Portrait	Nothing needed	head crop only, all four characters already have one
29	Battle Result <i>/challenge/result</i>	P16	Fist-bump with Nova	Must be drawn as a pair	fists meet
30	Leaderboard <i>/challenge/leaderboard</i>	P13	Fist raised, victory	Robot placed by code	figures overlap
31	Profile <i>/profile</i>	P03	Standing relaxed	Robot lifts off automatically	two separate shapes in the file
32	Our Journey <i>/profile/journey</i>	P03	Standing relaxed	Robot placed by code	figures overlap

33	Switch Student <i>/switch</i>	P15	Portrait	Nothing needed	head crop only, all four characters already have one
34	Parent Overview <i>/parent</i>	P15	Portrait	Nothing needed	head crop only, all four characters already have one
35	Parent Evidence <i>/parent/evidence</i>	P15	Portrait	Nothing needed	head crop only, all four characters already have one
36	Parent Plan <i>/parent/plan</i>	P15	Portrait	Nothing needed	head crop only, all four characters already have one

What that adds up to

Group	Screens	Needs new artwork
Head crop or no child figure at all	7	No
Child alone, no robot in the picture	3	No
Robot is a separate shape and lifts off automatically	14	No
Robot shares an outline but the figures do not interlock	9	No — code places her
Child and robot actually hold hands or bump fists	2	Yes

The request narrows to two poses

Only **2 screens** out of 36 contain a drawing where the child and the robot are physically joined: **Landing (screen 01), Battle Result (screen 29)**. Everything else either has no robot, or has her as a separate shape, or has the two merely overlapping, which code can rebuild from the separate robot image the project already holds.

So the poses that must be drawn as a pair are **P01 hand-hold and P16 fist-bump** — the hand-hold and the fist-bump. The high-five was expected to be a third, but the artwork shows a gap between the hands, so it composes like any other.

Three errors found in the project’s own records

Worth flagging because each one would have produced a wrong delivery.

Screen	What was recorded, and what is true
24 — Confidence Mission	Recorded as having no robot, so it was treated as safe to swap. The robot is in the picture and overlaps the child. Swapping without fixing this would have deleted her from that screen.

17 — Mission Complete	Recorded as a high-five with hands meeting. They do not meet; there is a clear gap. This removes a whole pose from the request.
-----------------------	---

10 and 15	Two records point at screens nothing renders any more. Screen 15 was removed from the product, and screen 10 draws a different picture than the one recorded. Both were inflating the count of artwork required.
-----------	--
