

Character Art Requirement

Kidsverse+ — child avatar system

Prepared for Design / Art Date 7 September 2026 Status Blocked on artwork

In one sentence

A child can choose one of four characters, but three of the four cannot be shown, because two of them were never drawn and the third cannot be separated from the robot mascot it was drawn against.

1. What the feature is meant to do

The child picks a character once, on the avatar screen. That character then has to be the one performing every action for the rest of the app, across all 36 screens. The pose, camera angle and layout never change. Only the child changes.

28 of those screens draw a full child figure. Because two characters have no artwork and the rest cannot be assembled, every child currently sees the same default boy no matter what they picked.

2. Current status

Item	Count	State
Screens designed and built	36	Done
Screens that draw a full child figure	28	Done
Distinct poses the child performs	12	Defined
Characters offered in the avatar picker	4	Built
Characters with complete artwork	2	2 missing
Screens with the robot baked into the child image	25	Blocker
Characters actually shown to a child today	1	Feature off

What the user sees right now

A child selects the girl. Her face appears correctly in the top-right corner, because a head crop exists for all four characters. But the large figure on every screen is still the default boy. This is not a coding fault. The app is deliberately holding the swap back, because turning it on with the artwork we have makes the robot mascot disappear from 25 screens.

3. The four characters

boy_01

Brown messy hair, light skin

Delivered

boy_02

Dark skin, short curly hair

Missing

girl_01

Dark skin, two curly buns

Missing

girl_02

Short bob, headband

Delivered

Character	Look	Situation
boy_01	Brown messy hair, light skin	This is the default child shown to everyone today.
boy_02	Dark skin, short curly hair	Selectable in the app, but has no artwork behind it.
girl_01	Dark skin, two curly buns	Selectable in the app, but has no artwork behind it.
girl_02	Short bob, headband	Artwork received, but cannot be shown yet. See the blocker.

Note on the first delivery: it arrived in two folders named `boy` and `girl`. On inspection the artwork inside them was the default boy and the bob-haired girl, not the two characters that were actually missing. So of the three swappable characters, one arrived and two did not.

4. The blocker, explained

On 25 of the 28 screens the child and the robot mascot are drawn into a **single flat image**. There is no seam between them. They are one picture.

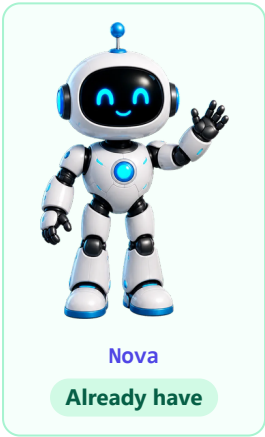

To show a different child on those screens, the app has to draw a picture of that child alone. The robot then disappears along with the boy she was drawn against. On 11 of those screens the two figures physically touch or overlap, so no automatic separation is possible.

A partial fix was rejected. The robot appearing on some screens and not others is worse for a child than her being consistently present. So the character swap is switched off entirely until it can be done properly.

Good news — most of this is already solved

A clean, separate, full-body image of the robot already exists in the project. It covers every pose where she simply stands next to the child, which is 8 of the 12 poses. Those screens can be assembled in code with no new artwork at all.

That leaves only **3 poses** where the child and the robot actually touch. Those are the only ones that genuinely have to be drawn.

Poses the existing robot image already covers

P02, P03, P05, P07, P08, P09, P12 and P13. In all of these the robot stands beside the child without touching, so one image serves all eight.

Poses that still have to be drawn

P01 hand-hold · **P11** high-five · **P16** fist-bump

In these three the child’s hand meets the robot’s hand. The point of contact has to be drawn. It cannot be assembled from two separate images.

5. The request

- Item 1 —** `boy_02` , all 12 poses
- Dark skin, short curly hair. Selectable in the app today with nothing behind it.
- Item 2 —** `girl_01` , all 12 poses
- Dark skin, two curly buns. Same situation.

Item 3 — the 3 contact poses, for the two characters already delivered

These must be drawn with **the child and the robot together in one frame**, holding hands, high-fiving or bumping fists. A sample in exactly this style has already been produced, so the approach is proven.

Item	Character	Poses each	Files
1	<code>boy_02</code> — dark skin, short curly hair	12	12

2	girl_01 — dark skin, two curly buns	12	12
3	girl_02 and boy_01 , robot in frame	3	6
Total			30

Items 1 and 2 already include their own three contact poses, so the total new artwork is 30 files.

6. Pose reference — all 12

Shown as the default boy, which is the approved reference. Each new character must match the same camera angle, framing, scale and expression. The three marked **Nova contact** need the robot drawn into the same frame.

Two cards are outlined in amber. Those poses have never been drawn for any character. The picture on them is a neutral standing figure borrowed as a placeholder, so please work from the written description on those two, not the image.

P01

Hand-hold with Nova

Standing front, full body, holding Nova's hand on the child's left.

Placeholder image. This pose has never been drawn. The figure shown is a neutral standing pose borrowed to fill the gap, not the pose described above.

Nova contact full

Used on: Landing, Login

P02

Presenting hologram

Standing front, left arm open toward a floating orb at chest height, palm up.

Nova beside full

Used on: Create Child

P03

Standing relaxed

Full body front, weight even, hands loose at the sides. The most reused pose.

Nova beside full

Used on: Setup, Test Intro, Profile, Our Journey

P05

Pointing up

Right arm raised, index finger up, head tilted up, open grin.

Nova beside full

Used on: Interests, Goals, Learn Hub

P07

Arm extended

Standing front, right arm extended to the side at waist height, presenting.

Nova beside full

Used on: Home, Test Arena, Opponents

P08

Seated on the ground

Sitting, one leg tucked, weight on one hand behind, looking up and to the right.

Nova beside full

Used on: Welcome

P09

Turned toward lesson

Standing, body angled inward, gaze on the teaching object to the side.

Nova beside full

Used on: Topic, Discover, Spot Mistake, Reading, Confidence

P11

High-five celebration

Mid-stride, both arms up, one open hand meeting Nova's raised hand.

Nova contact full

Used on: Mission Complete

P12

Waist-up beside Nova

Cropped at the waist, shoulder to shoulder with Nova, both facing front.

Placeholder image. This pose has never been drawn. The figure shown is a neutral standing pose borrowed to fill the gap, not the pose described above.

Nova beside waist

Used on: Test Question

P13

Fist raised, victory

One fist punched up, other arm bent, weight on the back foot, wide grin.

Nova beside full

Used on: Test Result, Challenge, League

P14

Arms crossed

Standing three-quarter facing right, arms folded, chin level. Battle stance.

No Nova full

Used on: Battle Preview

P16

Fist-bump with Nova

Three-quarter turned toward Nova, fist forward meeting Nova's fist.

Nova contact full

Used on: Battle Result

7. File format and naming

Background	Flat green screen, same as the first delivery. No shadow cast onto the background.
Format	PNG, one figure per file. For the three contact poses, one figure means the child and the robot together.
Resolution	1024 px on the long edge or higher. The first delivery was 1024 px and that was enough.
Camera	Identical to the reference on the previous page. Same eye level, same distance, same lens. A different camera angle cannot be corrected in code.
Framing	Full body with the feet included, except P12 which is cropped at the waist.
Naming	<character>/<POSE_ID>_<name>.png

Expected folder structure

```
boy_02/
  P01_hand-hold-with-nova.png      P09_turned-toward-lesson.png
  P02_presenting-hologram.png      P11_high-five-celebration.png
  P03_standing-relaxed.png         P12_waist-up-beside-nova.png
  P05_pointing-up.png              P13_fist-raised-victory.png
  P07_arm-extended.png             P14_arms-crossed.png
  P08_seated-on-the-ground.png     P16_fist-bump-with-nova.png

girl_01/
  ... the same 12 files ...

girl_02/
  P01_hand-hold-with-nova.png      P11_high-five-celebration.png      P16_fist-bump-with-nova.png

boy_01/
  P01_hand-hold-with-nova.png      P11_high-five-celebration.png      P16_fist-bump-with-nova.png
```

The pose IDs above are the application’s own. The first delivery used a different numbering, and matching the two by number would have put the wrong pose on every screen. Please use these IDs exactly as written.

8. Suggested order of delivery

#	Deliverable	What it unlocks
1	The 3 contact poses for girl_02	Turns the character swap on for the first non-default character, across all 28 screens. This is the smallest delivery that makes the feature visibly work.
2	girl_01 , all 12 poses	A second character becomes selectable. Girl coverage complete.
3	boy_02 , all 12 poses	All four characters live. Feature complete.

The fastest path

Three drawings, the hand-hold, the high-five and the fist-bump for `girl_02`, are enough to switch the whole feature on and demonstrate it working end to end. Everything after that is repetition of a proven process.

9. What happens on our side once it arrives

Step	State
Green background removed automatically and each figure trimmed	Built and tested
Each child figure positioned per screen from the approved layout	Built and tested
Robot drawn as her own separate layer on the 25 screens	To build
Hold on the character swap released	One line of configuration

The first two steps are done and were proven on the first delivery. The third is the remaining engineering work on our side and does not depend on the artwork, so it can be built in parallel rather than after. Once the files land, the swap goes live the same week.
